AI Policy

What AI Is

Artificial Intelligence (AI) refers to the use of advanced algorithms and machine learning models to process data, automate tasks, and make predictions. AI can analyze large datasets, recognize patterns, and generate responses, enhancing efficiency and decision-making across various domains.

The Risks of Using AI

While AI offers numerous benefits, it also presents several risks, including:

- **Bias and Discrimination:** AI systems may perpetuate biases present in training data.
- **Privacy Concerns:** AI can collect and process vast amounts of personal data, raising ethical concerns.
- **Misinformation:** AI-generated content can be misleading or false.
- **Job Displacement:** Automation may reduce the need for human labor in certain industries.
- **Security Threats:** AI can be exploited for malicious purposes, such as cyberattacks or fraud.

What AI Misuse Is

AI misuse occurs when AI tools are used in unethical or unauthorized ways, including but not limited to:

- **Plagiarism and Academic Dishonesty:** Using AI to generate content without proper attribution.
- **Deepfake Manipulation:** Creating deceptive media content.
- **Automated Misinformation:** Generating false narratives for personal or political gain.
- **Unauthorized Decision-Making:** Using AI in sensitive areas (e.g., hiring, medical diagnostics) without proper oversight.
- **Breach of Confidentiality:** Using AI to access or share private information without consent.

How AI Misuse Will Be Treated as Malpractice

AI misuse will be considered malpractice and will result in disciplinary action, including but not limited to:

- **Warnings and Reprimands:** For minor infractions.
- **Revocation of Privileges:** Restriction from using AI tools in an organizational setting.
- **Legal Consequences:** If AI misuse leads to violations of laws or regulations.
- **Academic or Professional Sanctions:** Including failing grades or professional demerits for unethical AI usage.

When AI May Be Used

AI may be used under the following conditions:

- **For Research and Innovation:** AI can aid in data analysis, pattern recognition, and scientific discovery.
- **For Efficiency and Productivity:** AI tools may be leveraged to enhance workflow automation and optimize tasks.
- **With Ethical Considerations:** AI use must align with ethical guidelines, ensuring fairness and transparency.
- **With Proper Oversight:** AI should be supervised by qualified individuals to prevent errors and misuse.

How AI Should Be Acknowledged

When AI is used in content creation, research, or decision-making, it must be properly acknowledged. This includes:

- **Citations and Disclosures:** Clearly indicating when AI tools have assisted in generating text, images, or data analysis.
- **Transparency in Decision-Making:** Disclosing when AI has played a role in recommendations or automation.
- **Ethical Compliance:** Following institutional or industry-specific guidelines for responsible AI use.
